LAB REPORT on

Database Management Systems (23CS3PCDBM)

Submitted by

Harsha B (1BM23CS107)

in partial fulfillment for the award of the degree of

BACHELOR OF ENGINEERING

in

COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING

(Autonomous Institution under VTU)

BENGALURU-560019

Sep-2024 to Jan-2025

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum)
Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled “Database Management Systems (23CS3PCDBM)” carried out by Harsha B (1BM23CS107), who is bonafide student of B. M. S. College of Engineering. It is in partial fulfillment for the award of Bachelor of Engineering in Computer Science and Engineering of the Visvesvaraya Technological University, Belgaum during the year 2022. The Lab report has been approved as it satisfies the academic requirements in respect of a Database Management Systems (23CS3PCDBM) work prescribed for the said degree.

Assistant Professor
Department of CSE, BMSCE

Dr. Kavitha Sooda
Professor & HOD
Department of CSE, BMSCE

Insurance Database

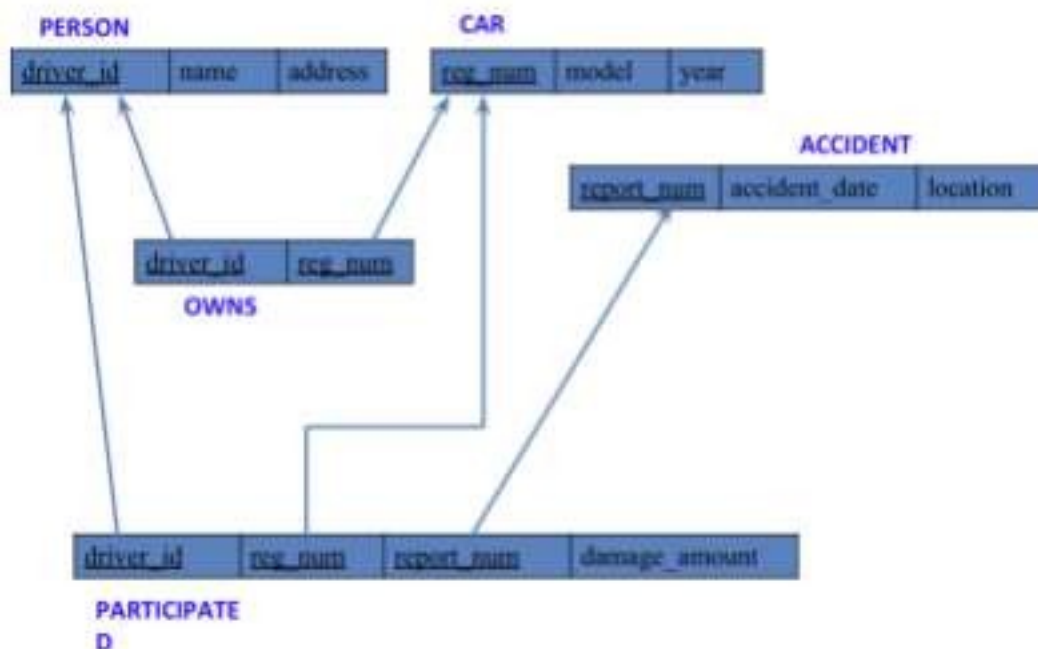

Question

(Week 1)

- PERSON (driver_id: String, name: String, address: String)
- CAR (reg_num: String, model: String, year: int)
- ACCIDENT (report_num: int, accident_date: date, location: String)
- OWNS (driver_id: String, reg_num: String)
- PARTICIPATED (driver_id: String, reg_num: String, report_num: int, damage_amount: int)
- Create the above tables by properly specifying the primary keys and the foreign keys. -
Enter at least five tuples for each relation - Display Accident date and location

- Update the damage amount to 25000 for the car with a specific reg_num (example 'K A031181') for which the accident report number was 12.
- Add a new accident to the database.
- To Do
- Display Accident date and location
- Display driver_id who did accident with damage amount greater than or equal to Rs.25000

Schema Diagram

Create database

```
create database insurances_421; use
insurances_421;
```

Create table

```
create table person(  
driver_id varchar(3) primary key,  
name  varchar(20)  not  null,  
address varchar(100)  
);  
create table car( reg_no  
char(8) primary key, model  
varchar(20), year int(4) not  
null  
);
```

```
create table  
accident( report_no int(4)  
primary key, accident_date  
date, location varchar(100)  
);
```

```
create table owns(  
driver_id varchar(3), reg_no char(8), foreign  
key(driver_id) references person(driver_id), foreign  
key(reg_no) references car(reg_no)  
);
```

```
create table participated(  
driver_id varchar(3), reg_no char(8), report_no int(4),  
damage_amt int, foreign key(driver_id) references  
person(driver_id), foreign key(reg_no) references  
car(reg_no), foreign key (report_no) references  
accident(report_no)  
);
```

Person table :

| | A05 | KA041702 | 15 | 5000 | | |
| * | NULL | NULL | NULL | NULL | | |

- Find the total number of people who owned cars that were involved in accidents in 2008.

```
select count(distinct driver_id) CNT from participated a, accident b where
a.report_num=b.report_num and b.accident_date like '2001%';
```

| Result Grid | | Filter Rows: | Export: |
|-------------|-----|--------------|---------|
| | CNT | | |
| ▶ | 1 | | |

- Add a new accident to the database.

```
insert into accident values(16,'2003-03-08',"Domlur");
```

```
select * from accident;
```

| Result Grid | | | |
|--------------|------------|---------------|------------------|
| Filter Rows: | | | |
| | report_num | accident_date | location |

| | 14 | 2004-12-17 | Mysore Road |
| | 15 | 2005-03-05 | Kanakpura Road |
| • | NULL | NULL | NULL |

TO DO:

- DISPLAY ACCIDENT DATE AND LOCATION
select accident_date as date,
location from accident;

| Result Grid | | |
|--------------|------------|----------------|
| Filter Rows: | | |
| | date | location |
| ▶ | 2001-01-03 | Mysore Rd |
| | 2002-02-04 | SE Circle |
| | 2021-01-03 | Bull Temple Rd |
| | 2017-02-08 | Mysore Rd |
| | 2004-03-05 | KR Puram |

- DISPLAY DRIVER ID WHO DID ACCIDENT WITH DAMAGE
AMOUNT GREATER THAN OR EQUAL TO RS.25000

Select participated.driver_id as driver_id from accident,participated where
accident.report_no = participated.report_no and participated.damage_amt >=
25000;

| Result Grid | |
|--------------|-----------|
| Filter Rows: | |
| | driver_id |
| ▶ | A02 |
| | A03 |

Question

(Week 2)

- PERSON (driver_id: String, name: String, address: String)
- CAR (reg_num: String, model: String, year: int)
- ACCIDENT (report_num: int, accident_date: date, location: String)
- OWNS (driver_id: String, reg_num: String)
- PARTICIPATED (driver_id: String, reg_num: String, report_num: int, damage_amount: int)
- Create the above tables by properly specifying the primary keys and the foreign keys. - Enter at least five tuples for each relation - Display Accident date and location
- Update the damage amount to 25000 for the car with a specific reg_num (example 'K A031181') for which the accident report number was 12.
- Add a new accident to the database.
- To Do
- Display Accident date and location
- Display driver_id who did accident with damage amount greater than or equal to Rs.25000

Schema Diagram

Queries

- Display the entire CAR relation in the ascending order of manufacturing year.

select * from car order by year asc;

| Result Grid | | | |
|-------------|----------|--------|------|
| | reg_no | model | year |
| ▶ | KA031181 | Lancer | 1957 |
| | KA052250 | Indica | 1990 |
| | KA095477 | Toyota | 1998 |
| | KA041702 | Audi | 2005 |
| | KA053408 | Honda | 2008 |
| • | NULL | NULL | NULL |

- Find the number of accidents in which cars belonging to a specific model (example 'Lancer') were involved.

select model, count(model) from participated, car where participated.reg_no = car.reg_no group by model;

| Result Grid | | | Filter Rows: |
|-------------|--------|--------------|--------------|
| | model | count(model) | |
| ▶ | Lancer | 1 | |
| | Audi | 1 | |
| | Indica | 1 | |
| | Honda | 1 | |
| | Toyota | 1 | |

TO DO:

- FIND THE AVERAGE DAMAGE AMOUNT

select avg(damage_amt) as average from participated;

| Result Grid | | | Filter Rows: |
|-------------|------------|--|--------------|
| | average | | |
| ▶ | 18600.0000 | | |

- DELETE THE TUPLE WHOSE DAMAGE AMOUNT IS BELOW THE AVERAGE DAMAGE AMOUNT

delete from participated where damage_amt < (select * from (select avg(damage_amt) from participated) as average);

| Result Grid | | | Filter Rows: |
|-------------|------------|--|--------------|
| | average | | |
| ▶ | 18600.0000 | | |

- LIST THE NAME OF DRIVERS WHOSE DAMAGE IS GREATER THAN THE AVERAGE DAMAGE AMOUNT.

select name from person, participated where person.driver_id = participated.driver_id and participated.damage_amt > (select

| | |
|-------------|--------------|
| Result Grid | Filter Rows: |
| name | |
| Pradeep | |
| Smith | |

avg(damage_amount) from participated);

- FIND MAXIMUM DAMAGE AMOUNT.

select max(damage_amount) from participated;

| | |
|-----------------|--------------|
| Result Grid | Filter Rows: |
| max(damage_amt) | |
| 50000 | |

Bank Database

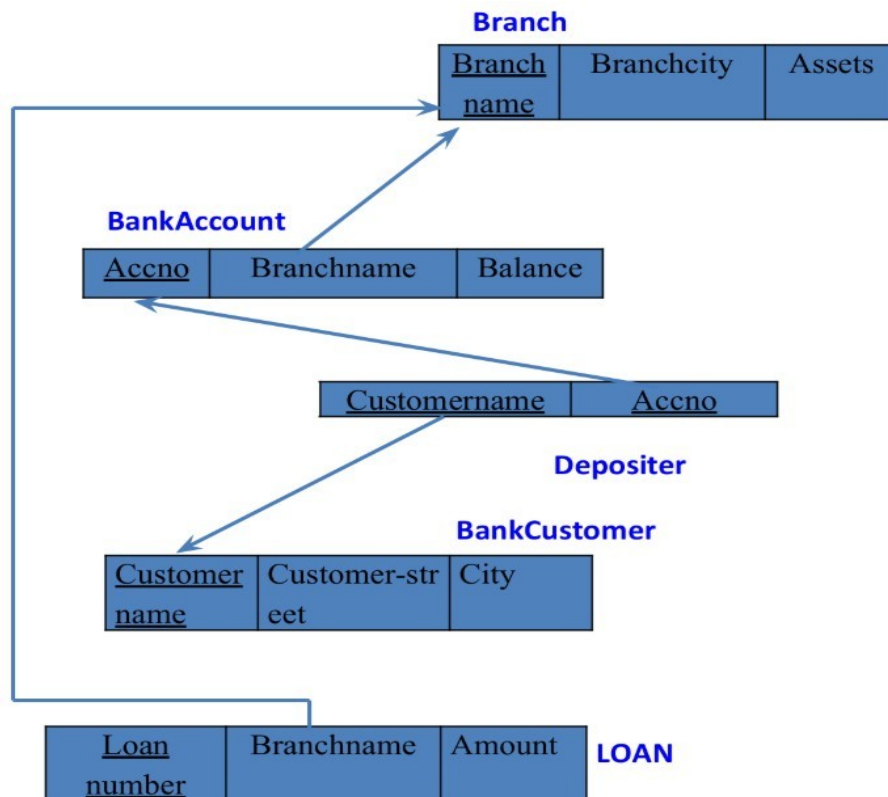

Question

(Week 3)

- Branch (branch-name: String, branch-city: String, assets: real)
- BankAccount(accno: int, branch-name: String, balance: real)
- BankCustomer (customer-name: String, customer-street: String, customer-city: String) - Depositer(customer-name: String, accno: int)
- LOAN (loan-number: int, branch-name: String, amount: real)
- Create the above tables by properly specifying the primary keys and the foreign keys. - Enter at least five tuples for each relation.
- Display the branch name and assets from all branches in lakhs of rupees and rename the assets column to 'assets in lakhs'.
- Find all the customers who have at least two accounts at the same branch (ex. SBI_ResidencyRoad).

- Create a view which gives each branch the sum of the amount of all the loans at the branch.

Schema Diagram

Create database

```

Select * from Borrower;

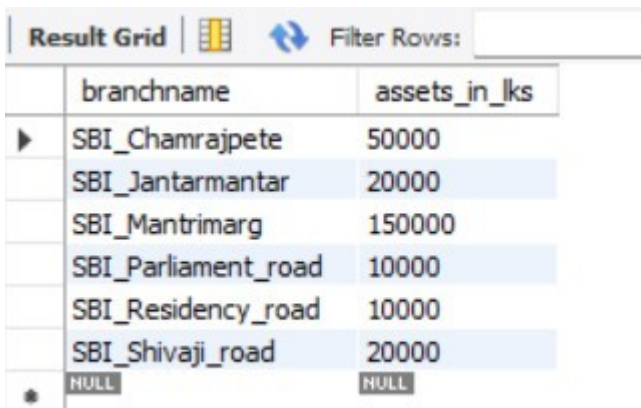

| | customername | loannumber |
|---|--------------|------------|
| ▶ | Avinash | 1 |
| | Dinesh | 2 |
| | Mohan | 3 |
| | Nikhil | 4 |
| | Ravi | 5 |
| ★ | NULL | NULL |

Queries

- Display the branch name and assets from all branches and rename the assets column to 'assets in lakhs'.

alter table Branch rename column assets to assets_in_lks; select
branchname, assets_in_lks from Branch;

| | branchname | assets_in_lks |
|---|---------------------|---------------|
| ▶ | SBI_Chamrajpete | 50000 |
| | SBI_Jantarmanatar | 20000 |
| | SBI_Mantrimarg | 150000 |
| | SBI_Parliament_road | 10000 |
| | SBI_Residency_road | 10000 |
| | SBI_Shivaji_road | 20000 |
| ★ | NULL | NULL |

- Find all the customers who have at least two accounts at the same branch(ex.SBI_ResidencyRoad).

select d.customername from depositer d, Bankaccount b where
b.branchname='ResideRoad' and d.accno=b.accno group by d.customername having
count(d.accno)>=2;

| | customername |
|--|--------------|
|--|--------------|

- Create a view which gives each branch the sum of the amount of all the loans at the branch.

create view br as select branchname, sum(amount) from loan
group by branchname;

select * from br;

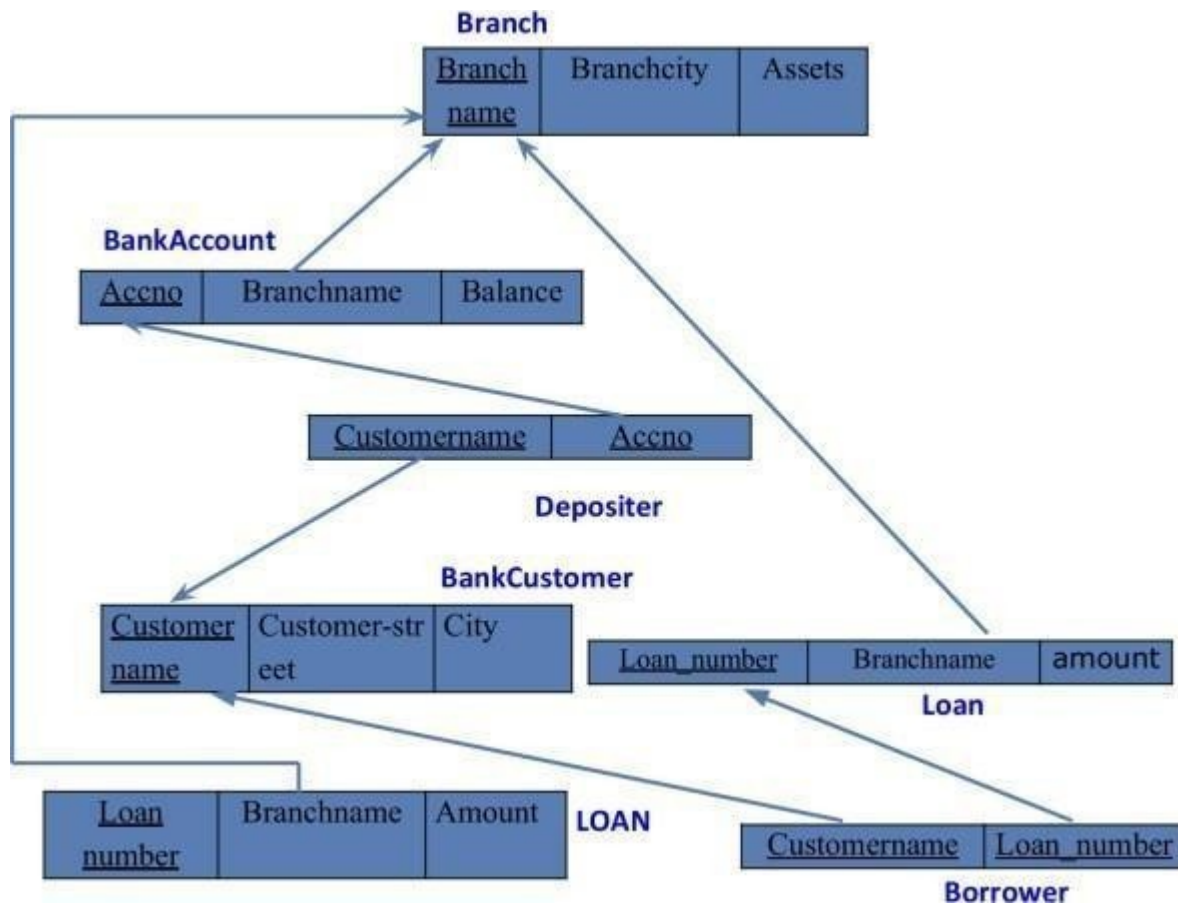

| Result Grid | | | Filter Rows: |
|-------------|---------------------|-------------|--------------|
| | branchname | sum(amount) | |
| ▶ | SBI_Chamrajpete | 1000 | |
| | SBI_Jantarmanatar | 5000 | |
| | SBI_Parliament_road | 4000 | |
| | SBI_Residency_road | 2000 | |
| | SBI_Shivaji_road | 3000 | |

More Queries on Bank Database

Question(Week 4)

- Branch (branch-name: String, branch-city: String, assets: real)
- BankAccount(accno: int, branch-name: String, balance: real)
- BankCustomer (customer-name: String, customer-street: String, customer-city: String)
- Depositer(customer-name: String, accno: int)
- Loan (loan-number: int, branch-name: String, amount: real)
- Borrower(customer-name: String, loan-number: int)
- Find all the customers who have an account at all the branches - located in a specific city (Ex. Delhi).
- Find all customers who have a loan at the bank but do not have an account.
- Find all customers who have both an account and a loan at the Bangalore branch
- Find the names of all branches that have greater assets than all branches located in Bangalore
- Update the Balance of all accounts by 5%
- Demonstrate how you delete all account tuples at every branch located in a specific city (Ex. Bombay).

Schema Diagram:

Create Table:

```
create table Borrower( CustomerName varchar(30), LoanNumber int, foreign key(CustomerName)
references BankCustomer(CustomerName), foreign key(LoanNumber) references
Loan(LoanNumber));
```

Structure of the Table:

desc Borrower;

| | Field | Type | Null | Key | Default | Extra |
|---|--------------|-------------|------|-----|-------------|-------|
| ► | CustomerName | varchar(30) | YES | MUL | HULL | |
| | LoanNumber | int | YES | MUL | HULL | |

Inserting Values to the tables:

insert into Borrower values ("Avinash", 1),

("Dinesh", 2),

("Mohan", 3),

("Nikil", 4), ("Ravi",
5); select * from
borrower;

| | CustomerName | LoanNumber |
|---|--------------|------------|
| ▶ | Avinash | 1 |
| | Dinesh | 2 |
| | Mohan | 3 |
| | Nikil | 4 |
| | Ravi | 5 |

Queries:

Find all the customers who have an account at all the branches - located in a specific city (Ex. Delhi).
select distinct CustomerName, CustomerCity from Branch b, BankCustomer bc where

| | CustomerName | CustomerCity |
|---|--------------|--------------|
| ▶ | Nikil | Delhi |
| | Ravi | Delhi |

b.BranchCity=bc.CustomerCity and bc.CustomerCity="Delhi";

Find all customers who have a loan at the bank but do not have an account. select distinct bc.CustomerName, l.BranchName, l.LoanNumber from BankCustomer bc, Loan l, Borrower b where bc.CustomerName=b.CustomerName and l.LoanNumber=b.LoanNumber and bc.CustomerName NOT IN (select d.CustomerName

| | CustomerName | BranchName | LoanNumber |
|---|--------------|-----------------|------------|
| ▶ | Mohan | SBI_ShivajiRoad | 3 |

from Depositer d);

Find all customers who have both an account and a loan at the Bangalore branch

select distinct bc.CustomerCity, b.CustomerName, l.LoanNumber, br.BranchName from Branch br, Borrower b, Loan l, BankCustomer bc where

br.BranchCity = bc.CustomerCity AND br.BranchCity = 'Bangalore' AND l.LoanNumber = b.LoanNumber AND bc.CustomerName = b.CustomerName and br.BranchName=l.BranchName;

Find the names of all branches that have greater assets than all branches located in Bangalore

| | CustomerCity | CustomerName | LoanNumber | BranchName |
|---|--------------|--------------|------------|-------------------|
| ▶ | Bangalore | Avinash | 1 | SBI_Chamrajpet |
| | Bangalore | Dinesh | 2 | SBI_ResidencyRoad |

select distinct br.BranchName, br.BranchCity, br.Assets from Branch br where br.Assets > all(select max(br.Assets) where br.BranchCity="Bangalore"); select max(Assets), BranchName from Branch group by BranchName;

| | BranchName | BranchCity | Assets |
|--|------------|------------|--------|
|--|------------|------------|--------|

Update the Balance of all accounts by 5%

update BankAccount set Balance= Balance+ 0.05*Balance;

Demonstrate how you delete all account tuples at every branch located in a specific city (Ex. Bombay).
delete from BankAccount ba where ba.BranchName in(select br.BranchName from Branch br where br.BranchCity="Bombay"); select * from BankAccount;

Employee Database

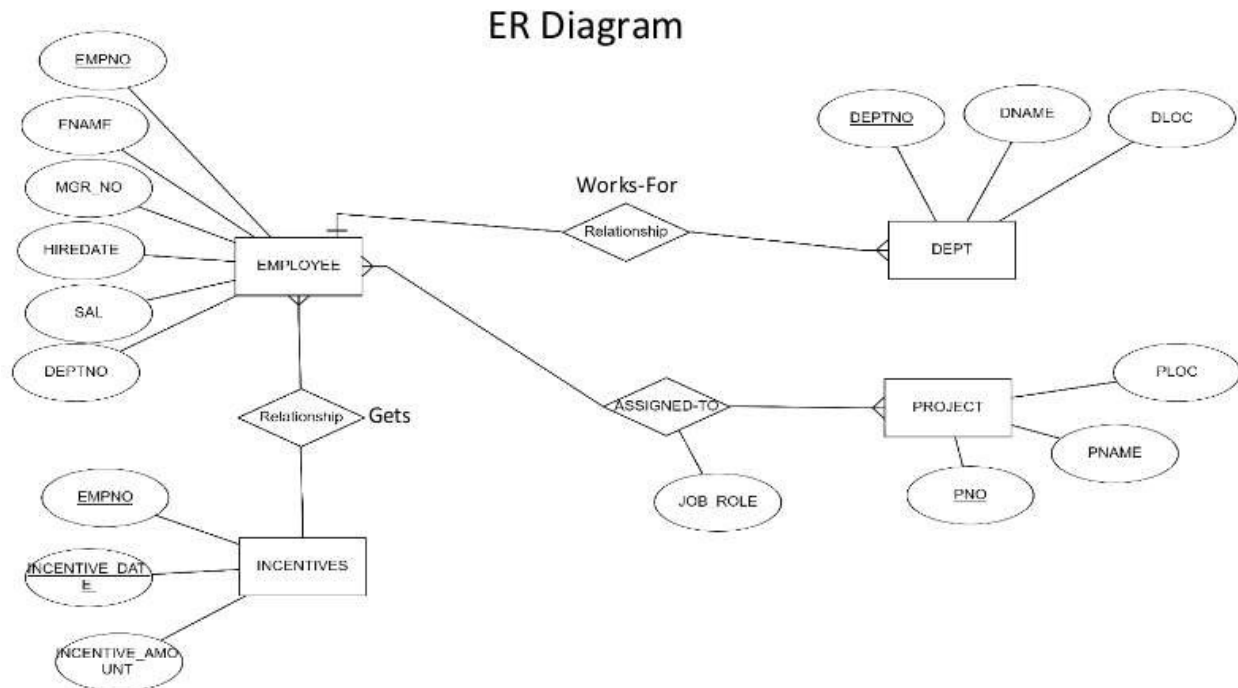

Question (Week

5)

1. Using Scheme diagram, Create tables by properly specifying the primary keys and the foreign keys.
2. Enter greater than five tuples for each table.
3. Retrieve the employee numbers of all employees who work on project located in

Bengaluru, Hyderabad, or Mysuru

4. Get Employee ID's of those employees who didn't receive incentives
5. Write a SQL query to find the employees name, number, dept, job_role, department location and project location who are working for a project location same as his/her department location.

Create database

```
create database employee_421;
use employee_421;
```

Create tables create table

```
dept ( deptno int primary
key, dname varchar(50),
dloc varchar(50)
);
```

```
create table employee ( empno int primary
key, ename varchar(50), mgr_no int, hiredate
date, sal int, deptno int, foreign key (deptno)
```

```
references dept(deptno)
```

);

```
create table project
( pno int primary key,
ploc varchar(50),
pname varchar(50)
);
```

```
create table assigned_to ( empno int, pno int,
job_role varchar(50), primary key (empno, pno),
foreign key (empno) references employee(empno),
foreign key (pno) references project(pno)
);
```

```
create table incentives (
empno int,
incentive_date date,
incentive_amount int,
foreign key (empno) references employee(empno)); Department
```

table :

| Result Grid | | | | | | |
|--------------|--------|-------------|------|-----|---------|-------|
| Filter Rows: | | | | | | |
| | Field | Type | Null | Key | Default | Extra |

More Queries on Employee Database

Question (Week

6)

1. Using Scheme diagram, Create tables by properly specifying the primary keys and the foreign keys.
2. Enter greater than five tuples for each table.
3. List the name of the managers with the maximum employees
4. Display those managers name whose salary is more than average salary of his employee.
5. Find the name of the second top level managers of each department.
6. Find the employee details who got second maximum incentive in January 2019. 7. Display those employees who are working in the same department where his manager is working.

- List the name of the managers with the maximum employees

```
select mgrno as manager_id, count(empno) as employeecount from employee group by mgrno order by employeecount desc limit 1;
```

| Result Grid | | Filter Rows: |
|-------------|------------|---------------|
| | manager_id | employeecount |
| ▶ | 2 | 2 |

- Display those managers name whose salary is more than averagesalary of his employee

```
select m.ename as managername,m.sal as managersalary,emp_avg.avg_employee_salary
from employee m join (select mgrno,avg(sal)as avg_employee_salary from employee group
by mgrno) as emp_avg on m.empno=emp_avg.mgrno;
```

| Result Grid | | Filter Rows: | Export: |
|-------------|-------------|---------------|---------------------|
| | managername | managersalary | avg_employee_salary |

| | david | | |

Supplier Database

Question (Week 7)

- Using Scheme diagram, Create tables by properly specifying the primary keys and the foreign keys.
- Insert appropriate records in each table.
- Find the pnames of parts for which there is some supplier.
- Find the snames of suppliers who supply every part.
- Find the snames of suppliers who supply every red part.
- Find the pnames of parts supplied by Acme Widget Suppliers and by no one else
- Find the sids of suppliers who charge more for some part than the average cost of that part (averaged over all the suppliers who supply that part)
- For each part, find the sname of the supplier who charges the most for that part

Schema Diagram:

Create Database: create database supp; use supp;

Create Tables: create table Supplier(s_id int primary key, s_name varchar(30), city varchar(20)); create table Parts(p_id int primary key, p_name varchar(30), color varchar(30));

create table Catalog(s_id int,
p_id int, cost float,
foreign key(s_id) references Supplier(s_id), foreign key(p_id) references Parts(p_id));

Structure of the Table:

desc Supplier;

| | Field | Type | Null | Key | Default | Extra |
|---|--------|-------------|------|-----|---------|-------|
| ► | s_id | int | NO | PRI | NULL | |
| | s_name | varchar(30) | YES | | NULL | |
| | city | varchar(20) | YES | | NULL | |

desc Parts;

| | Field | Type | Null | Key | Default | Extra |
|---|--------|-------------|------|-----|---------|-------|
| ► | p_id | int | NO | PRI | NULL | |
| | p_name | varchar(30) | YES | | NULL | |
| | color | varchar(30) | YES | | NULL | |

desc Catalog;

| | Field | Type | Null | Key | Default | Extra |
|---|-------|-------|------|-----|-------------|-------|
| ► | s_id | int | YES | MUL | NULL | |
| | p_id | int | YES | MUL | NULL | |
| | cost | float | YES | | NULL | |

Inserting Values to the tables:

insert into Supplier values

(10001, 'Acme_Widget', 'Bangalore'),

(10002, 'Johns', 'Kolkata'),

(10003, 'Vimal', 'Mumbai'),

(10004, 'Reliance', 'Delhi'); select * from Supplier;

No SQL Student Database

Question(Week 8)

- Perform the following DB operations using MongoDB.
- Create a database “Student” with the following attributes Rollno, Age, ContactNo, Email-Id.
- Insert appropriate values
- Write query to update Email-Id of a student with rollno 10.
- Replace the student name from “ABC” to “FEM” of rollno 11.

Create Database:

db.createCollection("Student");

```
Atlas atlas-cci5oy-shard-0 [primary] test> db.createCollection("Student");
{ ok: 1 }
Atlas atlas-cci5oy-shard-0 [primary] test>
```

Inserting Values to the tables:

db.Student.insert({RollNo:1, Age:21, Cont:9876, email:"antara.de9@gmail.com"});

```
{

  Age: 22,
  Name: 'FEM',
  Cont: 2276,
  email: 'rea.de9@gmail.com'
},
```

No SQL Customers Database

Question(Week 9)

- Create a collection by name Customers with the following attributes. Cust_id, Acc_Bal, Acc_Type
- Insert at least 5 values into the table
- Write a query to display those records whose total account balance is greater than 1200 of account type 'Z' for each customer_id.
- Determine Minimum and Maximum account balance for each customer_id.
- Export the created collection into local file system
- Drop the table
- Import a given csv dataset from local file system into mongodb collection.

Create Database:

```
db.createCollection("Customer");
```

```
{ ok: 1 }
```

Inserting Values to the tables:

```
db.Customer.insertMany([ {custid: 1, acc_bal:10000, acc_type:"Saving"},  
  {custid: 1, acc_bal:20000, acc_type: "Checking"}, {custid: 3, acc_bal:50000, acc_type:  
  "Checking"}, {custid: 4, acc_bal:10000, acc_type: "Saving"}, {custid: 5, acc_bal:2000,  
  acc_type: "Checking"}]);
```

```
{  
  acknowledged: true,  
  insertedIds: {  
    '0': ObjectId("675fe7b5f2355f925cc449cf"),  
    '1': ObjectId("675fe7b5f2355f925cc449d0"),  
    '2': ObjectId("675fe7b5f2355f925cc449d1"),  
    '3': ObjectId("675fe7b5f2355f925cc449d2"),  
    '4': ObjectId("675fe7b5f2355f925cc449d3")  
  }  
}
```

Queries:

Write a query to display those records whose total account balance is greater than 1200 of account type 'Z' for each customer_id. `db.Customer.find({acc_bal: {$gt: 12000}, acc_type:"Checking"});`

```
[
  {
    _id: ObjectId("675fe7b5f2355f925cc449d0"),
    custid: 1,
    acc_bal: 20000,
    acc_type: 'Checking'
  },
  {
    _id: ObjectId("675fe7b5f2355f925cc449d1"),
    custid: 3,
    acc_bal: 50000,
    acc_type: 'Checking'
  }
]
```

Determine Minimum and Maximum account balance for each customer_id.

`db.Customer.aggregate([{$group: {_id:"$custid", minBal: {$min:"$acc_bal"}, maxBal: {$max:"$acc_bal"}}}]):`

```
[
  { _id: 3, minBal: 50000, maxBal: 50000 },
  { _id: 5, minBal: 2000, maxBal: 2000 },
  { _id: 1, minBal: 10000, maxBal: 20000 },
  { _id: 4, minBal: 10000, maxBal: 10000 }
]
```

`db.Customers.drop()`

`true`

`mongoexport mongodb+srv://dbms:@cluster0.xmdk9.mongodb.net/test --collection=Student --out C:\Users\BMSCECSE\Desktop\st.json`

```

No SQL Restaurants Database

Question (Week 10)

- Write a MongoDB query to display all the documents in the collection restaurants.
- Write a MongoDB query to arrange the name of the restaurants in descending along with all the columns.
- Write a MongoDB query to find the restaurant Id, name, town and cuisine for those restaurants which achieved a score which is not more than 10.
- Write a MongoDB query to find the average score for each restaurant.
- Write a MongoDB query to find the name and address of the restaurants that have a zipcode that starts with '10'.

Create Database:

```
db.createCollection("restaurants");
```

```
{ ok: 1 }
```

Inserting Values to the tables:

```
db.restaurants.insertMany([ { name: "Meghna Foods", town: "Jayanagar", cuisine: "Indian",  
score: 8, address: { zipcode: "10001", street: "Jayanagar" } }, { name: "Empire", town: "MG  
Road", cuisine: "Indian", score: 7, address: { zipcode: "10100", street: "MG Road" } }, { name:  
"Chinese WOK", town: "Indiranagar", cuisine: "Chinese", score: 12, address: { zipcode:  
"20000", street: "Indiranagar" } }, { name: "Kyotos", town: "Majestic", cuisine: "Japanese",  
score: 9, address: { zipcode: "10300", street: "Majestic"  
} }, { name: "WOW Momos", town: "Malleshwaram", cuisine: "Indian", score: 5, address:  
{ zipcode: "10400", street: "Malleshwaram" } } ])
```

```
{  
  acknowledged: true,  
  insertedIds: {  
    '0': ObjectId("67600441f2355f925cc449d4"),  
    '1': ObjectId("67600441f2355f925cc449d5"),  
    '2': ObjectId("67600441f2355f925cc449d6"),  
    '3': ObjectId("67600441f2355f925cc449d7"),  
    '4': ObjectId("67600441f2355f925cc449d8")  
  }  
}
```

Queries:

Write a MongoDB query to display all the documents in the collection restaurants.

```
db.restaurants.find({})
```

```
[
  {
    _id: ObjectId("67600441f2355f925cc449d4"),
    name: 'Meghna Foods',
    town: 'Jayanagar',
    cuisine: 'Indian',
    score: 8,
    address: { zipcode: '10001', street: 'Jayanagar' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d5"),
    name: 'Empire',
    town: 'MG Road',
    cuisine: 'Indian',
    score: 7,
    address: { zipcode: '10100', street: 'MG Road' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d6"),
    name: 'Chinese WOK',
    town: 'Indiranagar',
    cuisine: 'Chinese',
    score: 12,
    address: { zipcode: '20000', street: 'Indiranagar' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d7"),
    name: 'Kyotos',
    town: 'Majestic',
    cuisine: 'Japanese',
    score: 9,
    address: { zipcode: '10300', street: 'Majestic' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d8"),
    name: 'WOW Momos',
    town: 'Malleshwaram',
    cuisine: 'Indian',
    score: 5,
    address: { zipcode: '10400', street: 'Malleshwaram' }
  }
]
```

Write a MongoDB query to arrange the name of the restaurants in descending along with all the columns `db.restaurants.find({}).sort({ name: -1 })`

```
[
  {
    _id: ObjectId("67600441f2355f925cc449d8"),
    name: 'WOW Momos',
    town: 'Malleshwaram',
    cuisine: 'Indian',
    score: 5,
    address: { zipcode: '10400', street: 'Malleshwaram' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d4"),
    name: 'Meghna Foods',
    town: 'Jayanagar',
    cuisine: 'Indian',
    score: 8,
    address: { zipcode: '10001', street: 'Jayanagar' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d7"),
    name: 'Kyotos',
    town: 'Majestic',
    cuisine: 'Japanese',
    score: 9,
    address: { zipcode: '10300', street: 'Majestic' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d5"),
    name: 'Empire',
    town: 'MG Road',
    cuisine: 'Indian',
    score: 7,
    address: { zipcode: '10100', street: 'MG Road' }
  },
  {
    _id: ObjectId("67600441f2355f925cc449d6"),
    name: 'Chinese WOK',
    town: 'Indiranagar',
    cuisine: 'Chinese',
    score: 12,
    address: { zipcode: '20000', street: 'Indiranagar' }
  }
]
```

Write a MongoDB query to find the restaurant Id, name, town and cuisine for those restaurants which achieved a score which is not more than 10.

```
db.restaurants.find({ "score": { $lte: 10 } }, { _id: 1, name: 1, town: 1, cuisine: 1 })
```

```
[
  {
    _id: ObjectId("67600441f2355f925cc449d4"),
    name: 'Meghna Foods',
    town: 'Jayanagar',
    cuisine: 'Indian'
  },
  {
    _id: ObjectId("67600441f2355f925cc449d5"),
    name: 'Empire',
    town: 'MG Road',
    cuisine: 'Indian'
  },
  {
    _id: ObjectId("67600441f2355f925cc449d7"),
    name: 'Kyotos',
    town: 'Majestic',
    cuisine: 'Japanese'
  },
  {
    _id: ObjectId("67600441f2355f925cc449d8"),
    name: 'WOW Momos',
    town: 'Malleshwaram',
    cuisine: 'Indian'
  }
]
```

Write a MongoDB query to find the average score for each restaurant.

```
db.restaurants.aggregate([ { $group: { _id: "$name", average_score:
{ $avg:"$score"}}} ])
```

```
[
  { _id: 'Meghna Foods', average_score: 8 },
  { _id: 'Kyotos', average_score: 9 },
  { _id: 'Chinese WOK', average_score: 12 },
  { _id: 'WOW Momos', average_score: 5 },
  { _id: 'Empire', average_score: 7 }
]
```

Write a MongoDB query to find the name and address of the restaurants that have a zipcode that starts with '10'.

```
db.restaurants.find({ "address.zipcode": /^10/ }, { name: 1, "address.street": 1, _id: 0 })
```

```
[  
  { name: 'Meghna Foods', address: { street: 'Jayanagar' } },  
  { name: 'Empire', address: { street: 'MG Road' } },  
  { name: 'Kyotos', address: { street: 'Majestic' } },  
  { name: 'WOW Momos', address: { street: 'Malleshwaram' } }  
]
```
